Dummy Answer Script

USN: 4PM23CD055

Student Name: Rahul Kumar (Dummy)

Subject Code: DS701

Subject: Deep Learning

Q1. Artificial Neural Networks consist of input, hidden and output layers. They learn by updating weights during training.

Q2. Backpropagation computes gradients of the loss function and updates weights using gradient descent.

Q3. CNNs are best for image processing, whereas RNNs are designed for sequential data like text and time series.
